

New Course Design

Oregon Golf Club

The Oregon Golf Club is an 18-hole private golf facility that was designed on 178 acres on top of Petes Mountain overlooking the Willamette River Valley. The golf course is carved from the steeply rolling property that once was a commercial Christmas tree farm with a backdrop of the Cascade mountain range.

This golf course project was the first design collaboration of longtime friends Peter Jacobsen and Jim Hardy. During the design process Jim and Peter both gave each hole individual attention, building on the natural elements found throughout this gorgeous site. The golf holes at Oregon Golf Club follow the rise and fall of the hills and hollows that dominate the property. The routing slips between mature woodlands, angles down ridges, and runs quietly along creek banks. One of the highlights is the 12th hole, a stunning par-3 that was created in a canyon setting with the tees and green sites carved into opposite hillsides. The hills are covered with more than 3,000 rose bushes that provide a breathtaking hazard.

Throughout the 18-holes at The Oregon Golf Club Jacobsen Hardy Golf Course Design combined beautiful scenery, rigorous terrain and a commitment to the environment, making it one of the most exclusive private golf courses in the Northwest.

Since opening in 1992 The Oregon Golf Club has been nothing short of a pure success story. It was the host site of the Pacific Northwest's premier golf event - **"The Fred Meyer Challenge"** from 1992 thru 1998. In 1992 it was ranked in the "Top 100 modern Courses in America" by *Links Magazine*. In 1993, it was nominated by *Golf Digest* as best new private course, and it was the host for the 1994 **Women's NCAA finals**.

The success of the Oregon Golf Club ultimately set the tone for what was yet to come from Jacobsen Hardy Golf Course Design.

Hole No. 5
